

Business and Commercial Offices

Infinity Smart Film is the ideal choice for sophisticated, state-of-the-art offices, executive boardrooms and conference rooms, where openness and privacy co-exist.

A flip of a switch provides discreet vision control on demand. When in the powered state, panels are "clear", allowing full view and daylight to pass into the central office area.

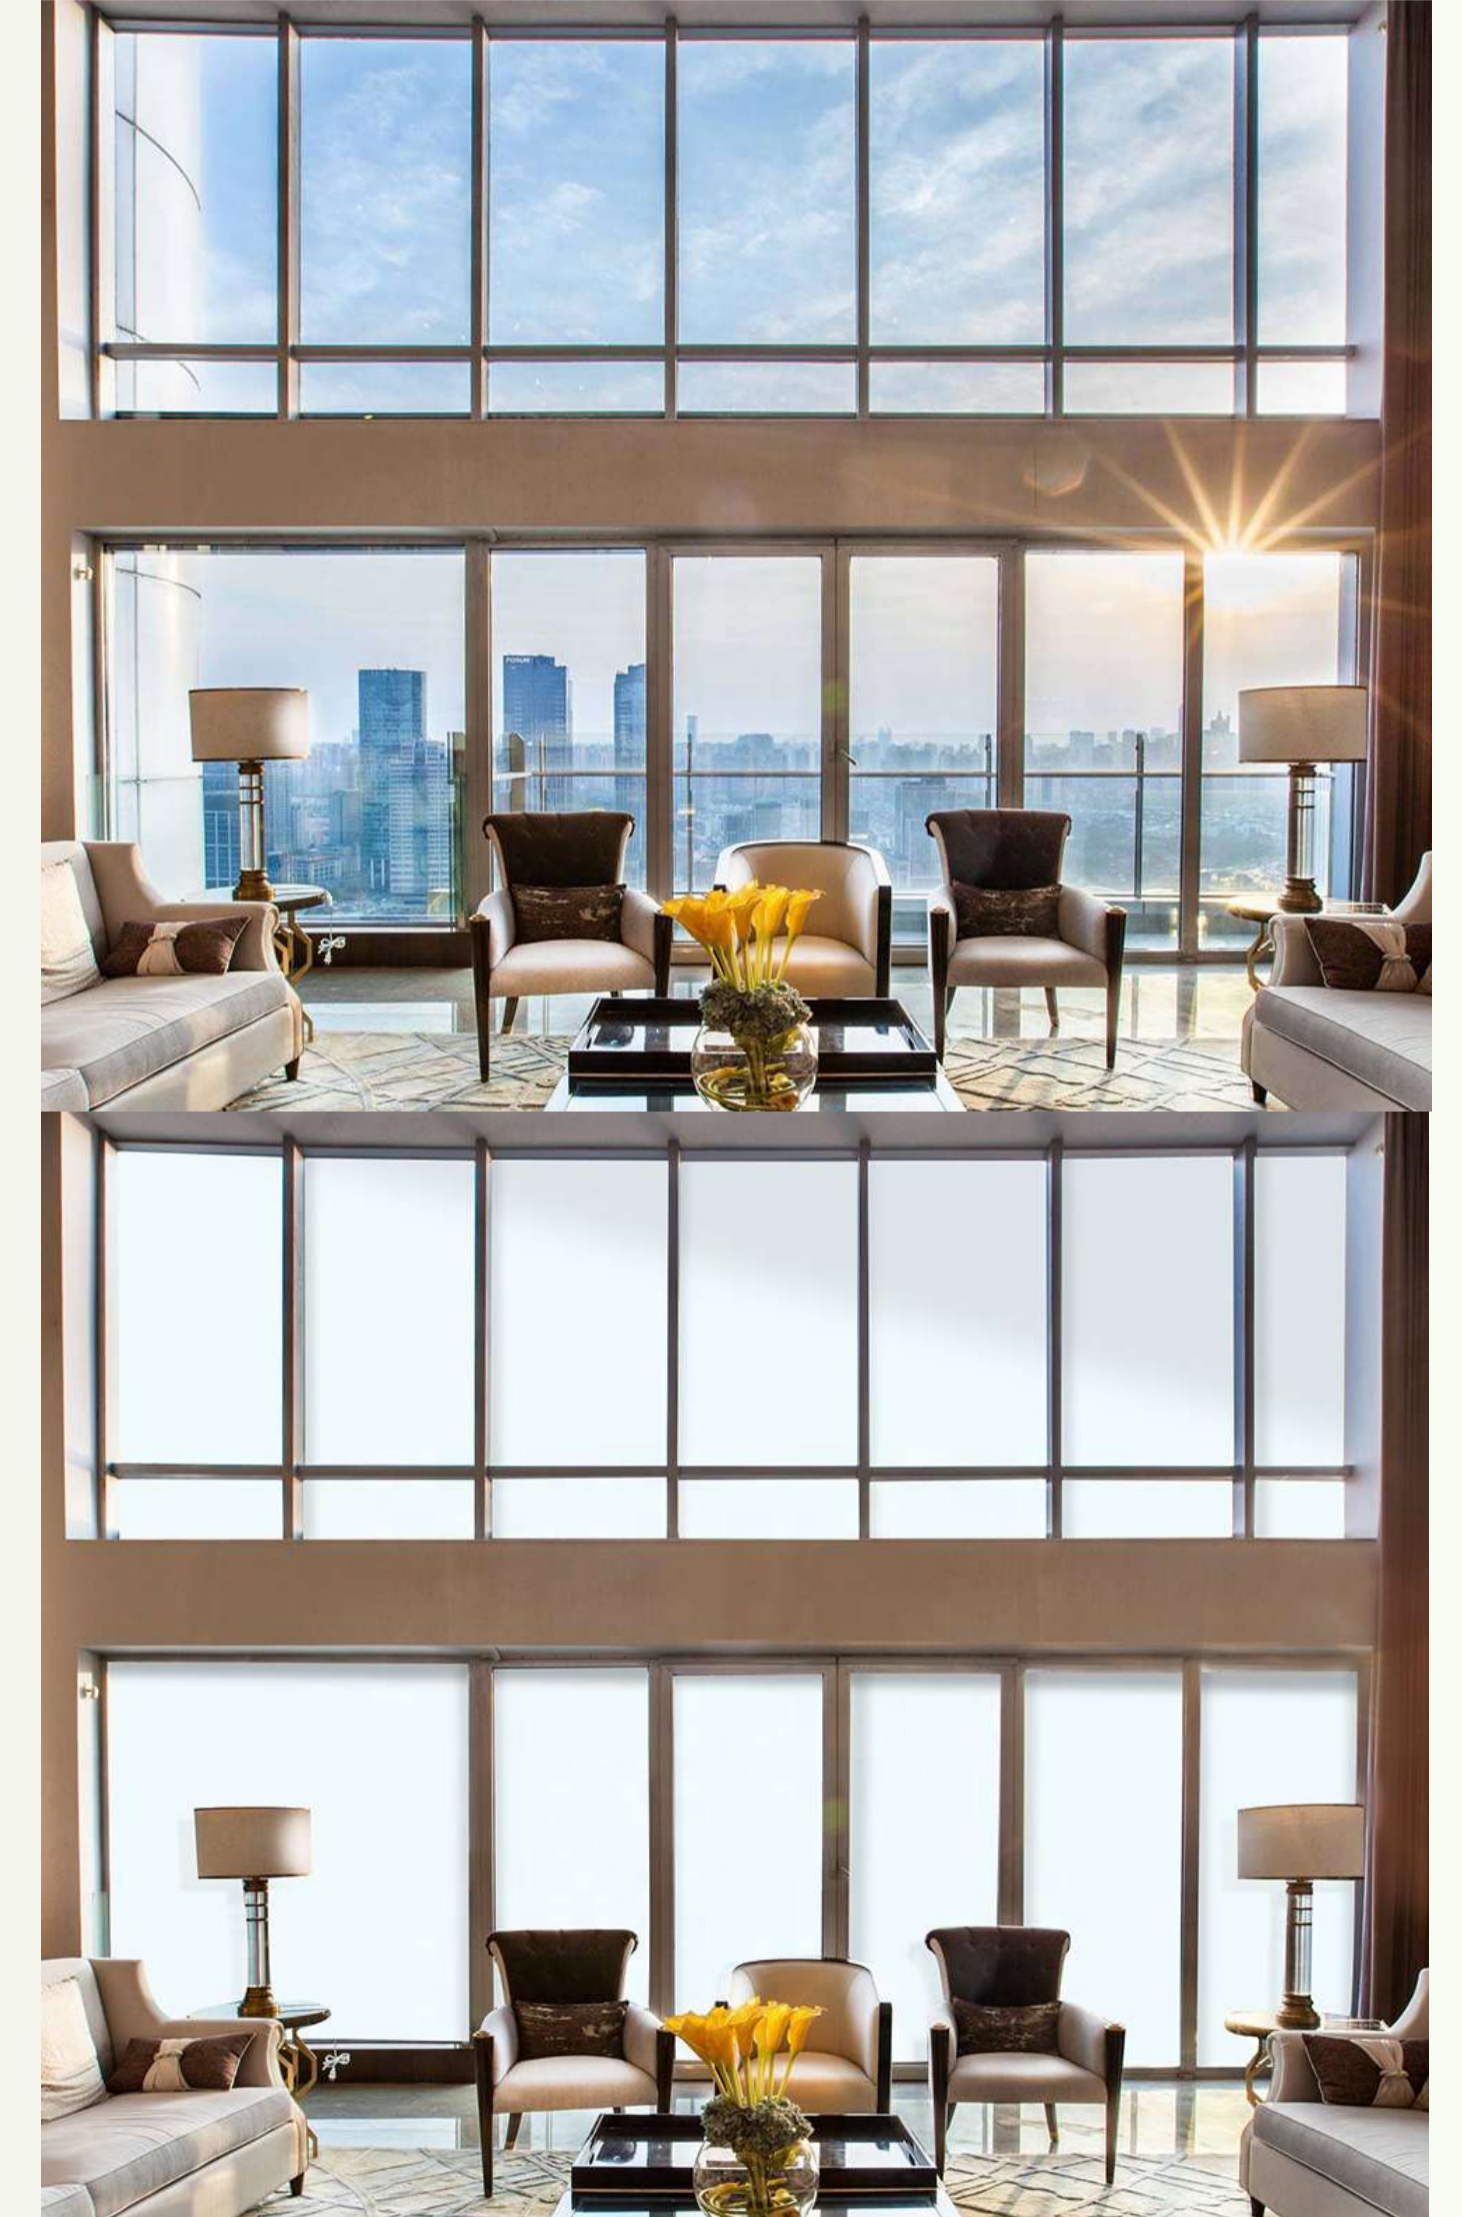

When Smart Film is unpowered, the view is completely obscured, creating complete privacy for meetings and multi-media presentations. While in private mode, Smart Film allows external diffused light to pass through to the common areas.

FILM OF THE FUTURE THAT LANDS IN THE PRESENT

Infinity Smart Film is an outstandingly versatile technology with many applications that improve the office, home, retail, educational and healthcare markets. Common applications include conference rooms, board rooms, ICU and Emergency rooms, room dividers, bedroom, living room and bathroom windows.

For architects, business or property owners seeking to effectively maximize square footage or to add that special touch, this Smart Film will dramatically change any space providing function and comfort all year long.

Healthcare

Infinity Smart Film delivers game-changing patient engagement advantages, ensuring exceptional visual and audible privacy, as well as extreme infection protection across all healthcare settings. Fabric curtains provide little to no privacy or protection, because they are not soundproof and collect germs that result in cross-contamination. Smart Film solves these troublesome issues once and for all.

Residential

Infinity Smart Film opens up many design possibilities, particularly for odd shaped, hard-to-reach windows and over-sized glass areas. Smart Film not only provides full privacy on demand, it helps to reduce sun glare, heat gain and blocks 99% of harmful UV rays. Smart Film will always allow natural lights to pass through; even in the private state.

Hospitality and Retail

Smart Film used in hotels, restaurants, clubs and other retail stores allows more space for a venue's visual effects, while adding a stylish touch. Infinity Smart Film offers the perfect solution for retail business advertisement by instantly turning storefront windows into HD quality video advertising.
